GLOBAL SUPPLY CHAIN

TRANSFORMATION ROADMAP

2024

2025

2026

2027

Design contractor management playbook and align with technical and operations teams

Significant step-change in Supply Chain process

Implement contractor management playbook and align with technical and operations teams

Significant step-change in Supply Chain process

Implement regional category management across regions in waves

Implementation of management operating system and global playbook across categories

Master data services implementation

SAP ERP upgrade evaluation

Supplier environmental initiatives & Scope 3 emissions tracking

Implement regional category management across regions in waves

Master data services implementation

SAP Ariba source to invoice design and implementation

Maintain Supplier identification, environmental initiatives, reporting, Scope 3 emissions tracking

SAP Ariba source to invoice design and implementation

Master data design / tool evaluation for services

Supplier risk / performance management and reporting & site cost rollout

Design Supply Chain portal

Supplier risk / performance management and reporting & site cost design

Design warehousing modifications, implementation & rollout

Rollout and standardize Requisition to Pay controls & automation across regions

Master data cleanup for goods / suppliers

Implement and rollout of Supply Chain Standard

Develop, implement and rollout of procurement board / directorate mandate / process

Performance Management reporting implement, rollout across regions

Technical Inventory Management System implementation & rollout

Implement local content strategy, approach and process within Supply Chain

Master data design / tool evaluation for services

Supplier risk / performance management and reporting & site cost design

Design and standardize warehousing processes, design, and determine quick wins

Implement Supplier identification, classification & engagement approach to drive environmental initiatives, reporting, to decrease their Scope 3 emissions & achieve the AGA environmental targets

Current situation

Performance Management & Reporting dashboard and framework

Develop formal Supplier identification, classification & engagement approach to drive environmental initiatives, reporting, to decrease their Scope 3 emissions & achieve the AGA environmental targets

Develop requirements and scope for Inventory Management System

Design Requisition to Pay controls & automation

Initiate development of local content strategy, approach and process within Supply Chain

Develop & implement the program, assign resources, tracking and measure gender diversity in the Supply Chain group
